HERHSIANG Sync→

(01) Fix In some scenarios, sync fails with too much data for synchronization.

(02) Fix Manual sync and scheduled sync are redundantly executed.

※Authentication & Permissions※

Domain Management→

Fix In some scenarios with AD authentication, the Admin account and password of domains synced via 【Architecture > HERHSIANG Sync】 are incorrect.

User Management→

Fix In some scenarios, users synced via AD cannot be deleted.

※Mail Audit & Firewall※

Filter→

Fix In some scenarios within gateway mode, the "Abnormal SMTP Flow" rules are incorrectly detected.

Advanced Settings→

Fix Unable to save other settings without enabling 【Mail Encryption】 feature package.

Mail Firewall→

Fix 【Mail Firewall Setup】 > "Send Abnormal Detection" : "Exception Rules" are ineffective.

※Mail Encryption※

Mail Encryption Rule→

(01) Fix 【New/Edit】 > “Encryption Rule Setup” > “Advanced Settings” > “Attachment Size Between (KB)” : Settings are ineffective in some scenarios.

(02) Fix【New/Edit】> “Process Method” > “Encryption Recipient” : Empty value can be saved when “Recipient” is selected.

※HERHSIANG Sandstorm※

Sandstorm Record→

(01) Fix Detailed record of IP Filter shows incorrect IP info.

(02) Fix In some scenarios, “Status” info is incorrect.

※Anti-Spam※

Basic Setting→

(01) Adjust “AI module” Enhance spam detection mechanism.

(02) Fix “AI module” > “Check New Version” : After a successful connection, failure info persists.

(03) Fix “AI module” > “Check New Version” : In some scenarios, the version info is incorrect.

※Statistical Report※

Statistical Report→

Fix Unable to save when certain items in “Report Type” are not selected.

※Log※

Use Log→

Fix In 【Mail Encryption > Mail Encryption Rule】 records, some info is incorrect.

※Others※

System→

(01) Fix Strengthen system security by disabling certain weak encryption protocols.

(02) Fix The impact of CVE-2011-0411 vulnerability.

Mail→

Fix In some scenarios, no record is generated when the same email has different recipients.

Console→

Fix 【Console】 Abnormal input occurs when selecting a hard disk partition for booting.

Fix 【Console】 Even without the bypass function, the relevant settings are still displayed.

Update Details·User Interface
