

Mail Server version 3.1.0.2 software update content description

Applicable Model :

MDispersion full range

Applicable version :

3.1.0.1

Precautions:

01 After the software is updated, the system will not automatically reboot, about 3 to 5 minutes.

02 Please note that after the update of this version is completed, the virus pattern database format will be cleared, and the virus scanning service will be aborted.

There are two ways to restore the operating program. -----

1. Waiting for the schedule update time (default 6 hours), the CLAMAV service will start the virus code update, which takes 5-10 minutes.

(depending on the actual network speed download)

2. If you want to reduce the risk of empty window, you can get from the management interface

Email virus filtering > Debugging settings

Virus code Press execute, update button now
