- (01) Now displays other invitees in the invitation.

- (02) Users can re-reply to the invitation.
- (03) **【CalDAV】** Added notifications.
- (04) **【CalDAV】** Supports macOS/iPhone reminders.
- (05) When an event is canceled, it will also be deleted from the invitees' calendars.
- (06) Now supports "Task list" and we fixed an issue where "Task list" would cause calendar anomalies.
- (07) **【CalDAV】** Removed calendar sharing function. (Users have to set calendar sharing on Webmail)
- (08) **【CalDAV】** Users now can invite non-local accounts.
- (09) When adding & modifying event invitations, changes will be synced with the invitee's personal calendars, including local users.
- (10) The system time zone will automatically adjust.
- (11) Fixed an issue where the status of the invitation was not correctly updated after users opened invitation emails in some cases.
- (12) Fixed an issue where calendar notifications were not displayed in some cases.
- (13) Fixed an issue that caused a display error of the calendar name in some cases.
- (14) Fixed an issue where information could not be synced to the server after users responded to event invitations on macOS in some cases.
- (15) Fixed an issue where events created in Thunderbird were not displayed on Webmail.
- (16) Fixed an issue where events could not be deleted after being added on macOS in some cases.
- (17) Fixed an issue where users could not add CalDAV accounts on macOS in some cases.
- (18) Fixed an issue where calendars could not sync on macOS in some cases.
- (19) Fixed an issue where invitations created on macOS did not show correct inviter information on Webmail.
- (20) **【CalDAV】** Fixed an issue where the calendar name on macOS would change after syncing.
- (21) **【CalDAV】** Fixed an issue where users could not remove invitees on iPhone after syncing.
- (22) **【CalDAV】** Fixed an issue when users added events to the calendar shared by other users, the event publisher would become "other users".
- (23) **【CalDAV】** Fixed an issue where events were in the wrong time zone on Webmail when syncing calendars on Thunderbird or MAC.
- (24) **【CalDAV】** Fixed an issue that caused layout error when syncing events added in Thunderbird.
- (25) **【CalDAV】** Fixed an issue where an error occurred when a personal calendar created by event invitation was transferred to other calendars.

- (26) **【CalDAV】** Fixed an issue where deleted or declined invitations are still displayed on the personal calendar.
- (27) **【CalDAV】** Fixed an issue where the default calendar was deleted.
- (28) **【CalDAV】** Fixed SQL Injection vulnerabilities.
- (29) **【CalDAV】** Fixed an issue where an error occurred when updating calendar events due to the incorrect update of time-related fields.

Setting→

- (01) **【Profile > Password】** When two-step verification is turned on, users have to use it to log in after changing their passwords.
- (02) **【Profile > Binding LINE Notify】** Fixed an issue where users could not receive notifications.
- (03) **【Profile > Unusual Login Notify】** Fixed an issue where changing the setting would cause other setting errors.
- (04) **【Signature/Automated Reply】** Enhanced security.

APP→

- (01) Fixed an issue where a new email did not display in the APP after users sent it via Thunderbird/Outlook.

Outlook Connector→

- (02) Fixed an issue where the program could not run in the 32-bit environment in some cases.
- (03) Fixed an issue where shared contacts sync failed when the Outlook configuration file had Exchange accounts in some cases.

※PushMail※

- (01) Z-push version now supports contact & calendar sync.

[Supported model HERHSIANG_MailServer (HMail P30 / MDispersion H168 / MDispersion H57TA2D / MDispersion H91X2D)]

- (02) Fixed an issue where users could still use PushMail when the function was disabled.

※Others※

- (01) **【System】** New Webmail interface (default port 999).

[Supported model HERHSIANG_MailServer (HMail P30 / MDispersion H168 / MDispersion H57TA2D / MDispersion H91X2D)]
